

YOUR WATER METER RECEIVED AN UPGRADE FROM FLAGSTAFF WATER SERVICES TODAY!

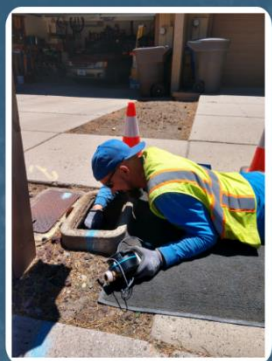

We are transitioning from mechanical metering to smart metering in your neighborhood through our **Radio Read Program.**

PROGRAM PURPOSE

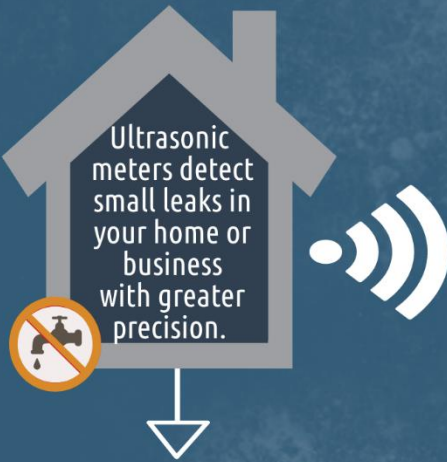

The Radio Read program is a city wide effort to replace outdated, mechanical water meters with the latest ultra-sonic meter technology. Smart metering systems have digital reading capabilities, provide higher accuracy in recording flow rates, and utilize proactive alarms for quick detection of leaks, burst pipes and reverse flows.

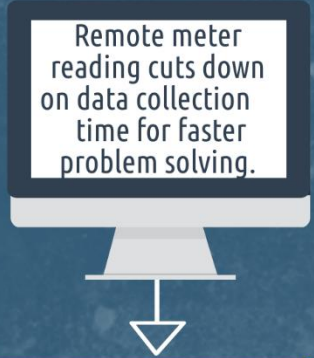

Expected service life is double that of the old meters!

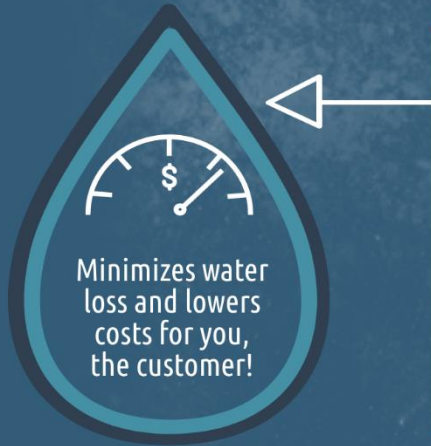

IMPROVING EFFICIENCY

Ultrasonic meters detect small leaks in your home or business with greater precision.

Remote meter reading cuts down on data collection time for faster problem solving.

Minimizes water loss and lowers costs for you, the customer!

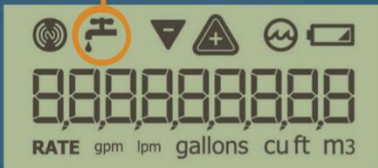

Jacobs Engineering Group
Self-contained digital meters have no moving parts, eliminating long-term maintenance costs.

WE ARE WATER AWARE!

Watch for service trucks upgrading water meters in your neighborhood to help save every drop!

You can lift the cover on your new water meter and it will display an icon to indicate consistent water use beyond the meter, signaling a possible leak.

RATE gpm lpm gallons cu ft m3

If you suspect a leak, please immediately call 928-213-2450 for Emergency Services.

If you have questions about work being done in your neighborhood, call us at 928-213-2400.
