This document must be returned to Water Services Division ATTN: Industrial Pretreatment, 2323 N Walgreens St, Suite 1, Flagstaff, AZ 86004 or Pretreatment@flagstaffaz.gov.

Backflow Prevention Assembly – Exemption for Residential Fire sprinkler annual backflow testing requirement

Property Street Address: _____

Owner (s): _____

Backflow device serial number: _____

In alignment with Arizona Administrative Code R18-4-215 C, the City of Flagstaff no longer requires the annual testing of backflow devices found on a Class 1 or 2 fire sprinkler system in a single-family residence that is solely used for residential purposes. A Class 1 or 2 fire sprinkler system is a connection from the City's water distribution system with no connections from other water supplies, no antifreeze or additives, and no tanks or reservoirs. The system may contain a booster pump.

By filling out and signing this form, you verify that the fire system at this location is a Class 1 or 2 fire system in a single-family residence. Once this letter has been received by the City of Flagstaff's cross-connection program, your account will be deactivated in the City's backflow database management program and will no longer receive testing notices.

If you are removing the fire sprinkler system from your residence, please contact the Flagstaff Fire Department for permits and regulations concerning the removal process.
