Commercial Rebate Program Conditions and Guidelines

How it Works:

Choose from a pre-approved list of devices (the menu options) with predictable savings and defined monetary incentives. You will receive either a rebate based on the values outlined or 50% of the actual product cost, whichever is less. Water Conservation staff will review customized projects for items not listed on the menu.

Eligibility:

- Applicant must be the property owner or a representative of the property owner.
- Applicant must have an active water account with the City of Flagstaff.
- Water Conservation Staff must deem the project within the scope of the existing business process – conversion cannot be a change in the business type or product type.

Technical Requirements:

- Menu Items Rebates: All projects with menu items are capped at 50% of the product costs, excluding labor, tax, shipping, or other costs, OR the outlined rebate value in the table, whichever is less.
- If applicant wants to purchase own "FREE" items (must be WaterSense certified), Water Conservation will rebate these items at the prices listed below:
 - Aerators: \$0.67; Showerheads: \$4.00; Pre-Rinse Spray Valves: \$24.00
- Customized Project Rebates: For items not listed on the pre-approved menu above, Water Conservation Staff will review applications on a case-by-case basis. All projects will be capped at 50% of the actual product costs (excluding labor, tax, shipping, and other costs) OR a rebate rate of \$0.05/gallon of water saved, whichever is less.
 - Half the amount of rebate money will be paid after these 4 criteria are met:
 - Inspection of the devices to be retrofitted
 - Discussion about anticipated water savings with the business
 - Receipt of the Application and W-9 Form
 - Receipt of the invoice or proof of payment
 - The remaining half of the payment will be made after a 6-month performance review and demonstrated water savings
- Projects must be sustained for at least 5 years or transfer of property title, whichever comes first. If the equipment requires replacement prior to 5 years, it must be replaced with equipment of equal or greater water efficiency.

Terms of the Commercial Rebate Program:

- For projects replacing over 10 fixtures, applicants participate in a pre-inspection.
- All converted devices must be WaterSense certified models.
- Applications will be accepted or rejected in writing and applications may be rejected subject to availability of funds.
- The project must be completed within one calendar year.
- An applicant may apply multiple years on a rotating basis.
- Upon project completion, Water Conservation Staff will conduct a final inspection.
- The applicant is responsible for complying with all laws, policies, codes, and ordinances that may apply to construction and device replacement.
- Rebates may be considered taxable income; therefore, every applicant must provide a current W-9 form prior to receiving the rebate.
